

Activity 07 – Using Layers

Data File

07.ballerina.psd

Scenario

A friend has asked you to add text and color to a picture of her daughter from a recent ballet recital. She wants to frame it for her daughter's room.

- 1) Open **05.ballerina.psd**.
- 2) Rename the layer **Jenny**.
- 3) Select the **Paint Bucket** tool and on the **Options** bar, set the **Tolerance** to **10**.
- 4) Select a vibrant color in the **Color Picker**.
- 5) Paint the background of the image. If the entire background does not get covered, use the **Paint Bucket** tool to add color to remaining background pixels.
- 6) Set a vertical guide to the 3-inch mark and a horizontal guide at the 1/2-inch mark.
- 7) Select the **Horizontal Type** tool. Set the font family to a font of your choice, the font size to **14 pt**, and the font color to a color that creates a contrast with the background color.
- 8) Just below the intersection of the guides, type **Jenny's Recital**. If necessary, use the **Move** tool to move the text so that it all shows in the image.
- 9) On the next line, type **A Celebration**.
- 10) Save the file as **my_ballerina.psd** and close the file.
